RECEIVED

FEB 04 2000

Hello,

I am writing in response to the DOE's plan to transport Nuclear waste through my community. I would like to request a hearing to be held in NYC...

High level waste designated for Yucca Mountain will be moving on American highways and train routes by the front yards of more than 50 million Americans. The transportation of this waste poses a huge public health risk. DOE studies project a rate of one accident per 343 shipments. That translates into, at the very minimum, 268 accidents over the next thirty years as up to 90,000 shipments of nuclear waste make their way Yucca Mountain.

How many children must die before politicians and multi-national corporation CEOS open thier eyes?

Sincerely Jordan
